Novartis Quality Control Building Holly Springs, NC

The pharmaceutical giant, Novartis built a new vaccine manufacturing facility in Holly Springs, North Carolina. N-R-G-FLOR® cellular deck system was utilized in this 115,000 square foot quality control and administrative building. This location was the first cell-culture derived, influenza vaccine manufacturing facility in the United States.

The owner requested a cable management system that not only provided security, but also the ability to have larger power and data capacity at the workstation. Customized spacing of our NB preset was the solution. The buildings curved design provided the challenge of pie shaped floor shaped floor area, with the deck running parallel to the skewed beams. Cordeck detailed and manufactured the deck in these areas for field cutting, ensuring a seamless fit.
